

Railway Reservation System

LAB-6

Problem Statement

It is a system used for online booking of railway tickets, providing train timing details, reservation, billing and cancellation on various types of reservations.

Software Requirements Specifications:

- Users are given a secured user id and password for further process.
- Customers can view the details of all the available trains; details includes timings, costing, date, stops destinations and arrivals.
- Tickets are bought through online payment and billing in personal / traveller's info in a e-form.
- Customer can choose the seats they want AC or non-AC, quotas and so on.
- Customer can advance book their tickets so they don't have to fear staying in long lines or it getting full in last moment.
- Two types of reservation will be there General and Tatkaal, accordingly Customer can choose and proceed.
