ONLINE SHOPPING SYSTEM

Problem Statement:

The online shopping system allows the users and vendors to exchange products remotely and reduces the cost and time as it is online.

Software Requirements Specifications:

- Customer needs to make an account to register itself to the online shopping website
- Customer will be given valid user id and password to access the website
- Shopping carts are given to make order/ to buy things.
- Customers can view all the products, compare their details and then can purchase
- The products are categorized into various categories for various sections of various categories for an easy browsing.
- There is a secure payment feature giving options like online payment or cash on delivery.
